JORDAN physiotherapeutic couch, A line

JORDAN A line – actuator-free couches with fixed height.

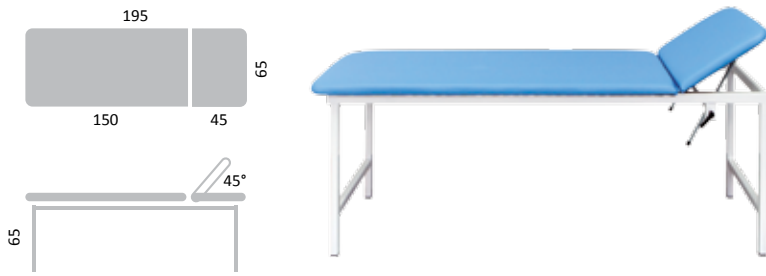

All model of this line are made at a standard height of 60 cm, but you may change this fixed height in your purchase order. Simple but solid structure guarantees high stability. Leveling screws can compensate for floor unevenness.

The headrest can be adjusted either by a system of A1 levers or by an A3 and AS gas strut.

JORDAN AS is the ideal solution for multi-purpose rooms where you can fold out the bed from the wall whenever it is needed.

It is one of the most simply constructed couches on the market.. It has a broad field of application as an examination table in medical practitioner and specialist doctor surgeries, as massage tables or relaxation couches in spas, welfare institutions and sport centres.

JORDAN physiotherapeutic couch, D line

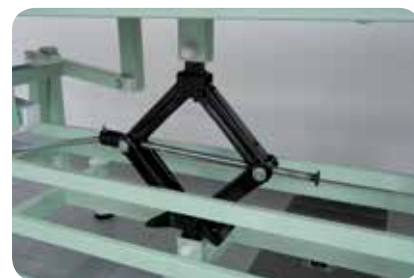

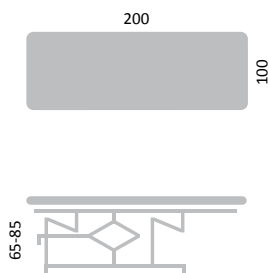

JORDAN D line – actuator-free couches with manual height adjustment using a lever mechanism.

The height of all the models can be adjusted manually using a built-in lever by the patient's feet. The adjustment range is from 65 to 85 cm. Base width of 100 cm for model D1 can be changed on request at no extra cost in the range of 70 to 100 cm.

These couches are recommended in particular for places where the service staff rotates, for example different massagers working with the same bed. This bed can be adjusted to individual height. Depending on your needs you may choose from three basic models as well as from a number of accessories.

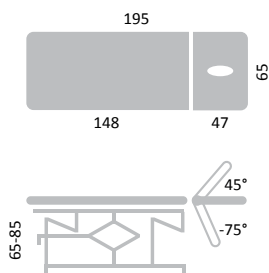

This line is recommended for massages in spas, physiotherapy or sport centres, where it is used by more than one massager.

JORDAN physiotherapeutic couch, B line

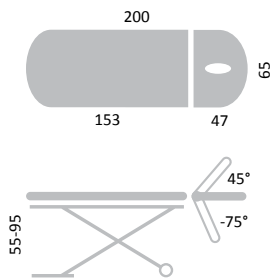

JORDAN B line – single-actuator couches with a simple construction and electric height adjustment in the bed axis..

The couch may be adjusted by electric drive at a range from 55 to 95 cm with the patient lying on the bed. Models B2 and B3 are easy to handle due to their light weight and castors. The couches are suitable for classic massages or simple exercises with a physiotherapist.

The area of application is very broad. The disadvantage of this line is that it is less stable in the top position and its lower safe working load (150kg).

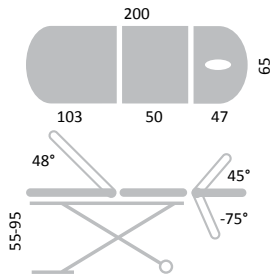

By selecting the B2 prima or B3 prima couches you can acquire a couch which is adjustable in the couch axis and can be equipped with castors and an in-built actuator control unit.

JORDAN physiotherapeutic couch, F line

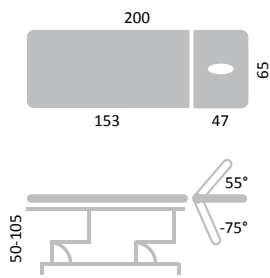

JORDAN F line - single-actuator couches with a stabile construction and electrically adjustable height.

The F line offers the basic model of a professional couch in a new elegant design. The structure is stable in all therapeutic positions and heights with a lifting range from 50 to 105 cm with a patient lying on the couch. The lower position enables disabled and older people easy access to the couch.. The couch positions can be easily and quietly adjusted during therapy. This product line has a broad area of application.

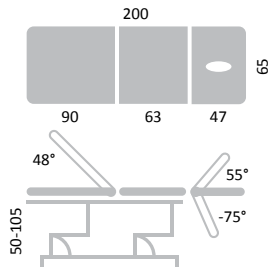

Beds can be used for examinations, massages, physiotherapy. In addition, they can be used for simple surgical procedures. You can customize your bed to meet your needs by selecting from a broad portfolio of accessories.

JORDAN physiotherapeutic couch, G line

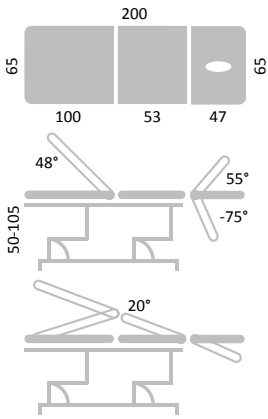

JORDAN G line – double-actuator couches of stable construction whose height can be adjusted and backrest altered to the drainage position electrically.

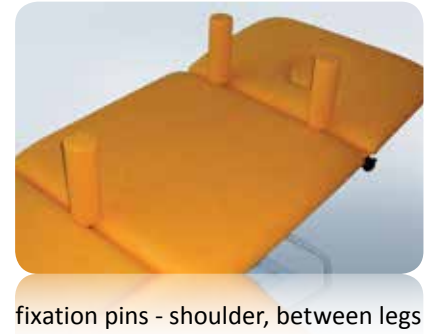

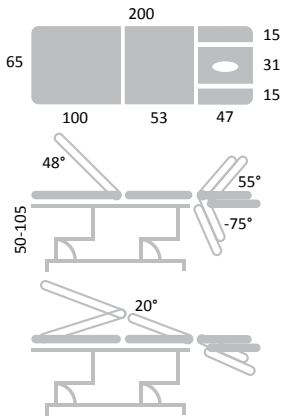

The G line offers a higher standard of professional couches with an elegant design. The construction is stable in all therapeutic positions and heights with a lifting range from 50 to 105 cm even with the patient lying on the couch. The lower position enables disabled and older people easy access to the couch. This product line is equipped with a second actuator for adjusting the bed to the drainage position for special physiotherapy. Bed positions can be easily and silently adjusted during therapy.

This product line has a broad area of application. The couches can be used for examinations, massages; they are highly suitable physiotherapeutic treatment for which they are specially designed. In addition they can be used for simple surgical procedures.

JORDAN physiotherapeutic couch, U line

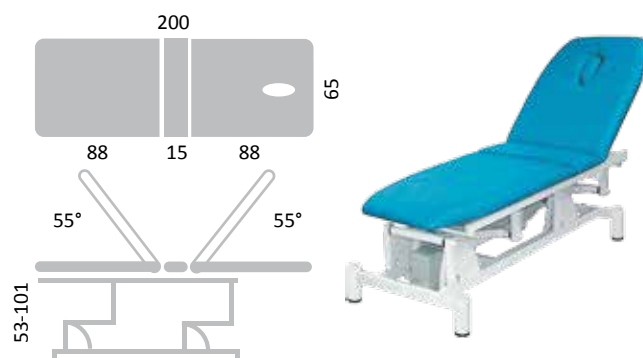

JORDAN U line – double actuator couches of stable construction whose height can be adjusted and backrest altered to a U-shape electrically.

The individual models offer a line of physiotherapeutic beds designed for physiotherapists. The simple and accurate control using two to three electric actuators, or by a gas strut as required, enables adjustment to all positions applied in physiotherapy. Depending on the demands of your practice, you may choose from two to seven section beds. These beds are suitable for spa bath houses, welfare centres, physiotherapy and rehabilitation centres as well as for specialist doctor surgeries.

JORDAN couch, E line

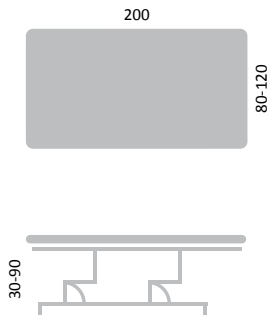

ORDAN E line -single-actuator couch with electric height adjustment, specially designed for the Vojta method. The basic design for Vojta method offers a single-actuator bed with electric height adjustment. The construction is stable in all therapeutic positions and heights with a lifting range from 50 to 105 cm even with the patient lying on the bed. **At your request, we can reduce the minimum height of 30 cm. Stroke is then in the range of 30 to 87 cm.** The standard bed width is 100 cm, but you can extend it from 80 to 120 cm. Beds are used in particular in welfare centres for children, physiotherapeutic centres specializing in the Vojta method as well as in households for home exercises with child patients.

We also manufacture a simpler actuator-free JORDAN E folding box couch with fixed height for the Vojta method. The bed is delivered in a standard 100 cm width. You can specify the required height in the purchase order.

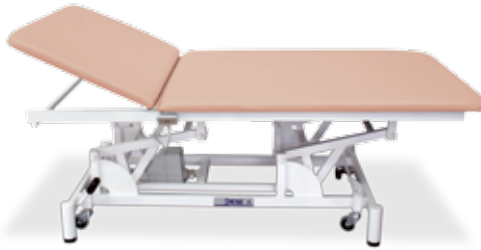

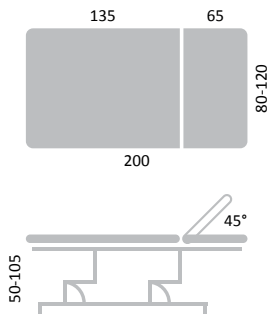

The mobile JORDAN E box is an ideal solution for smaller premises – apartments and multi-purpose rooms.

JORDAN traction and tilting couches, line ME and C

JORDAN traction couches – ME line - single-actuator couch with electric height adjustment and couch tilt of up to 60°.

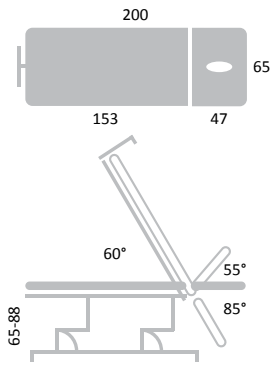

The bed is delivered with a suspension cross. These beds are suitable for spa bath houses, welfare centres and physiotherapeutic centres as well as for specialist doctor surgeries.

JORDAN tilting beds – C line - double-actuator bed with electric height adjustment and bed tilt of up to 90°.

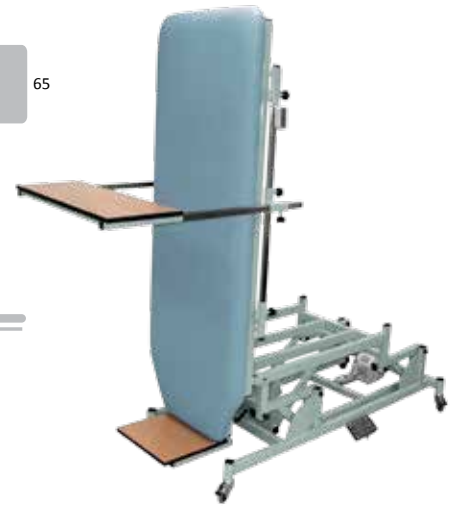

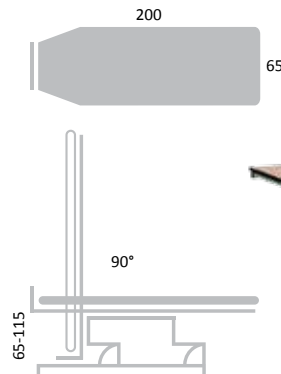

The vertical position is controlled by a manual electric control unit; the height is adjusted by two foot controls on each side of the bed. The beds include an ascending step and arm rests with a panel.

These beds are suitable in particular for hospitals and physiotherapy centres.

Untypical JORDAN couch modifications

We offer untypical design modifications of our Jordan couches after consultation. Optional constructions are possible, untypical upholstery, changes in couch width etc.

Beta construction version

Perfect type of construction control. Adjustable height 48 - 95 cm.

These constructions can be applied to models F2, F3, F4, F5 G3 and G5.

Column construction version

Höhenverstellung 60 - 100 cm.

Untypical upholstery

Untypical design of side supports and three-section bolster possible.

Cardio hole in the bolster with a cover.

Hygienic mats and disinfectants

Single-use hygienic protective mats

These mats consist of two layers of pulp enabling perfect absorption of liquids and polyethylene film which prevents saturation. They come in 33, 38 and 51 cm widths. Perforation at distances of 50, 80 and 160 cm used to tear the mat. We supply the mats in the following colour versions: green, blue, yellow, apricot, lilac, pink and white.

Disinfectants

We recommend only INCIDIN LIQUID disinfectants tested by us for the couches and tables. We supply them in 1 l or 5l containers. An appropriate way of applying the disinfectant is to use a mechanical pump or sprayer.
